Re: Besblock Star Performer blocks in E-WM-8

Robust Details Limited is pleased to confirm that Besblock's 'Star Performer' cellular aggregate block has been accepted for use in the robust details cavity masonry wall E-WM-8; and where used in houses, in the inner leaf of its associated flanking walls.

An amended version of the E-WM-8 artwork is due to appear in the December 2009 update to the Handbook, but in the interim, this letter confirms that using Besblock 'Star Performer' blocks will not affect E-WM-8 registrations provided:

- 'Star Performer' blocks are laid with the cells open to the lower mortar bed;
- separating walls do not contain a mix of solid and cellular blocks;
- all other specifications for E-WM-8 are followed.

If you require further confirmation or technical guidance, please contact Robust Details Ltd on tel: 0870 240 8209 or email technical@robustdetails.com
